Nothing is Impossible.®

Mini Brochure

Do you need a hand with software development?

If you are considering outsourcing, think of a true “partner-organization” rather than contractors who come and go.

Amphinicy Technologies is the organization that cares! We devote 100% to our customer, providing all-round software support from low-level to enterprise.

When you think of outsourcing your software development – think of only 1!

- **15 years of satellite experience**
Understanding of the industry's specific needs.
- **Highly qualified staff**
Over 50% of our engineers hold a Masters or PhD degree.
- **Specialized in complex software**
Track record of highly sophisticated projects.
- **Wide range of expertise**
Over 100 projects based on different technologies.
- **Customer is King**
Unparallel flexibility to meet deadline- quality- and cost- restraints.

Amphinicy Technologies Software That Understands The Satellite Industry.

Who are we?

Amphinicy Technologies is a **software company** specialized in producing complex software for organizations that operate in satellite environments. The company operates in Luxembourg and in Croatia, and works with the world's leading hi-tech professionals.

Who are our engineers?

The company employs only first-class engineers with extensive experience in software development. These **highly motivated individuals** have adopted the highest level of professional ethics, security standards, and reliability.

Who are our project managers?

Projects Managers in Amphinicy are used to **dealing with large customers** who set strict deadlines and expect only the highest quality. The deadlines are taken seriously and the company commits itself 100% to getting the job done, often even to tough deadlines.

Who is our main customer?

Amphinicy Technologies is **the major software contractor of the world's leading satellite provider**. Every time when a new satellite is being launched – our engineers provide software support from low-level to enterprise.

Wide selection of software skills

Throughout their career, software engineers at Amphinicy Technologies have worked on a very wide scope of different projects using different technologies. The projects' diversity provided rigorous technical and professional training.

Today, the company's **skills and expertise cover wide area of technologies** including Java (JSE, JEE); C/C++; embedded systems; modern operating systems including Solaris, MS Windows, Linux; industry standard protocols like GPIB, CAN and SNMP; multimedia technologies; and different networking technologies.

Do your current software needs match our competencies?

Give us a call and ask for your area of interest. Amphinicy Technologies has **over 100 projects successfully carried out to completion**. Each project or solution can be fine-tailored to your specific needs. This brochure just offers a glance at our specialties.

Enhancing your Operation Systems

A number of our software solutions support various operation scenarios in up and running systems. Some examples: **Satellite network management** allows a fast reconfiguration of your system while satisfying a lot of business rules. **Traffic measurement** gives you a real time and precise overview of your traffic flow. **Monitor and control** provides operators with a user friendly and easy-to-use view on system configuration and signal measurement.

Boosting your Business Ambitions

Let's create a high-performance environment with the introduction of a performance-driven **CRM solution**, an all-round system which fits perfectly into your business needs. Take advantage of task- or issue management with easily trackable **trouble ticket management**, where every reported problem enriches your knowledge base. Make usage of **customizable reporting** of all your business activities. Or consider our **billing solution** which enables fully customizable satellite services charging.

Supporting your Satellite Missions

Support for **In-orbital testing** is one of our key areas of expertise. Our software is currently present in ground station facilities as well as **portable stations** all over the satellite footprint. We help our partners in system **monitoring and control**, **signal measurement** and **telemetry management** throughout the entire mission.

Shaping Multimedia & Content Management

Our software engineers were among the first pioneers in **Interactive Television** in Europe. They know how to design interactive platforms and offer a wide range of interactive services and applications. The most profitable market today is still direct-to-home TV and multimedia content delivery. Therefore, **DVB stream management** is one of the very cores of our business. As the satellite industry is turning towards **IP based satellite services**; we also began using **IMS technology** for building IP multimedia services.

If you do need a hand with software development, give us a call.

Lunch is on us :)
